

Data Files

We'll be the **[Data Files]** Experts, so you don't have to be.™
Continually monitored, updated, and accuracy-checked.

Why YEI Data and Libraries?

In addition to our competitive pricing and rigorous quality controls, we are fully dedicated to serving the needs of our clients, knowing that our success depends on their success. Support is included with your data cost, so there are no support fees or hidden charges. We provide expertise and assistance for all the data that we provide, and help clients through all phases of data usage, including:

- implementation of data sets
- interpretation and appropriate use of data content
- programming and database logic
- workarounds for legacy systems
- content changes during migration and upgrades
- content questions

Formats and Content

Our data is generated and published in standard flat-file delimited and XML formats, compatible with any commercial database system. Custom and proprietary formats are also available to meet your unique requirements. File format changes are provided at no additional charge.

Data Files for medical necessity are compatible with 3rd party systems, such as CPSI, Epic Systems, Fletcher-Flora (FFlex eSuite, LabPak), Iatricis (MNO, LAB e-Laborate), MediTech, and others.

Delivery and Updates

Our standard data delivery is via secure download. Email notices alert you when updated files are available along with a summary of the changes. Updates are ongoing with data posted as frequently as daily.

Web-Based Query and Batch Services

In addition to data files which require you to implement your own logic and interface, we also offer web-based query systems that manage all of the logic, rules, and updates for you. All solutions can be branded according to your specifications, customized to your needs, and seamlessly integrated into your existing services.

Quality Data

In order to maintain accurate and continually updated records for the entire United States and territories, we monitor an extensive set of primary content sources. Data is compiled and validated from these primary sources, and extensively audited using both certified coders and proprietary artificial intelligence systems. Our automated and manual auditing systems consistently correct errors found within the original data, and we work with the source organizations in verifying and correcting their incorrect or inconsistent data. All data and systems are maintained in-house by our employees, and no work is outsourced.
